Sheet

AMC825-4

PMC Module with 4 CAN bus Nodes ARINC825 compliant for Testing & Simulation of Avionic CAN bus Systems

General Features

The ► **AMC825-4** PCI Mezzanine Card (PMC) can work either with full functionality as an active CAN node for testing and simulating or in listening-only mode for monitoring and recording purposes of Avionic ► **CAN bus (ARINC825)** applications on up to 4 electrically isolated CAN bus nodes concurrently.

All nodes are in conformance with the ISO11898-1/-2 standard. They are accessible by software separately and can be used as 4 independent CAN bus nodes.

An onboard IRIG-B time decoder allows users to accurately synchronize single or multiple modules to a common time source. All supported signals are available through front-I/O and rear-I/O interface.

The AMC825-4 module consists of FPGA based CAN interface controllers as well as a FPGA based 32-bit microcontroller core and a separate processor for IRIG-B synchronization with high resolution time stamping.

All nodes are operating concurrently at CAN bus high speed bit rate of up to 1Mbit/s with the intelligence to process

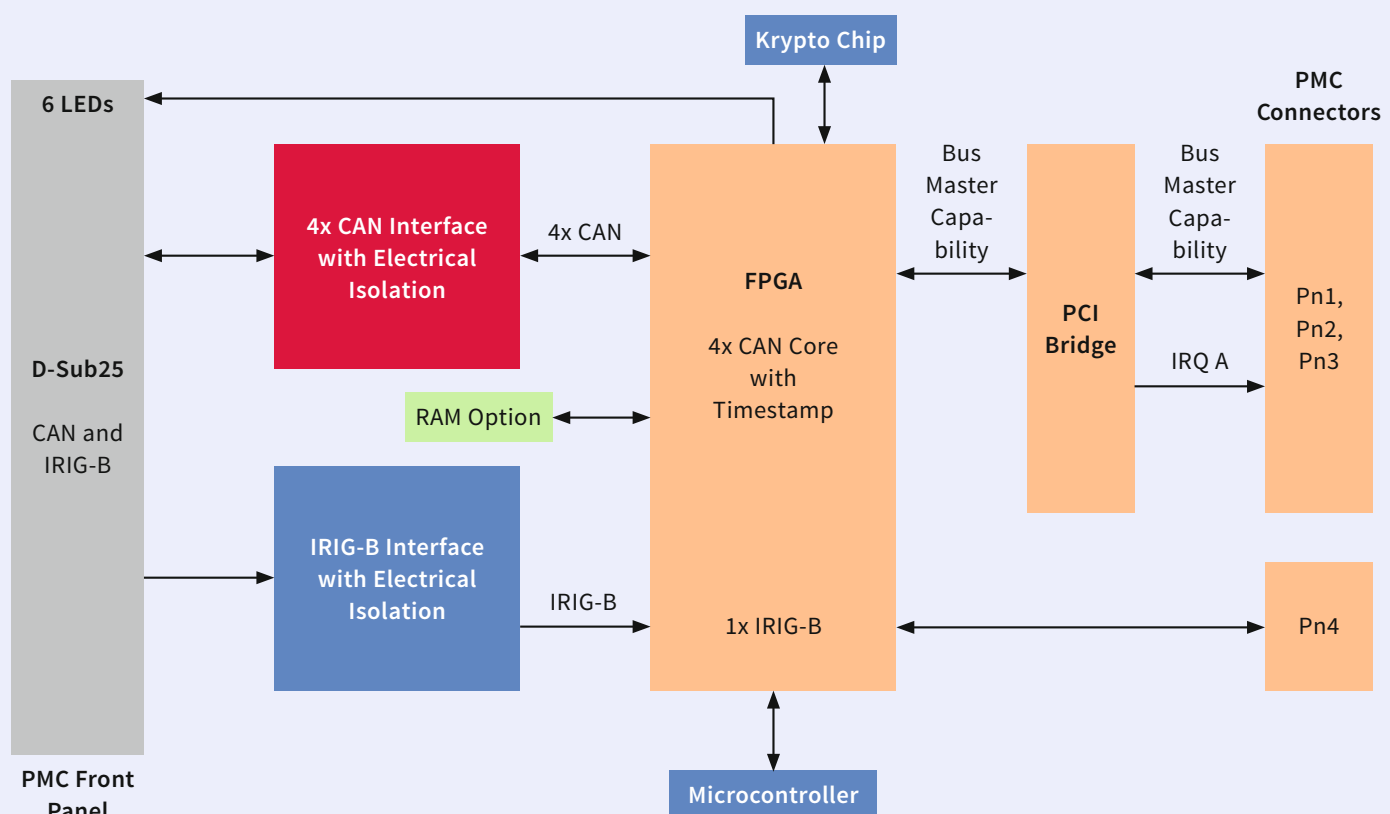

scheduling of CAN frames in real time on-board to significantly off-load the host processor.

Supported options for all versions of AMC825 cards include:

- Rear-I/O
- Conduction Cooling/Conformal Coating for Embedded Applications
- Extended Temperature Range (on request)

The AMC825-4 module operates also with the PBA.pro™ Databus Test and Analysis Tool for Windows and Linux.

AMC825-4 Block Diagram

CAN bus Channel Operation

The AMC825-4 module provides real time simulation of up to 4 CAN bus nodes concurrently via FPGA based CAN control engine with an additional 32-bit micro-controller. Each CAN bus operation speed is programmable in the range from 10kbit/s up to 1Mbit/s in accordance with the CAN 2.0B specification. Automatic baud rate detection is available.

The AMC825-4 supports the 11-bit and 29-bit message ID operation in ID oriented (Object) mode. A listening-only mode is available for chronological monitoring (FIFO mode). All basic CAN node functions are implemented in accordance with ISO11898, CAN 2.0 A/B.

Traffic Generation

AMC825-4 transmitter operation allows users to fully program all relevant fields of the CAN bus message protocol including an 11-bit or 29-bit message identifier, RTR bit, data length code and up to 8 user defined data bytes. Synchronization of transmissions across multiple ports is supported.

Cyclic/Acyclic ID Transmission Mode

- Programmable Inter Message Timing available
- Single Shot or Automatic Retry Function if Arbitration lost
- Arbitration Lost Notification
- CAN bus compliant Error Handling
- Message and Error Counters

Physical Bus Interface

The AMC825-4 cards have integrated CAN bus transceivers which are compliant with the ISO11898-2 high speed specification. The CAN bus interfaces are electrically isolated by default. All 4 ARINC825 nodes are available at the front-I/O provided at one 25-way D-Sub (male) connector and at the rear-I/O connector interface.

The following signals are provided on both interfaces:

- 4 ARINC825 (CAN bus) Nodes (on Rear-I/O TTL Level only)
- IRIG-B Input analog and RS-422 compatible

IRIG-B Time Decoder

AMC825-4 cards have an onboard IRIG-B time decoder with 1 μ s resolution and an automatic free-wheeling detection. This allows synchronization of multiple AMC825-4 cards to one common IRIG-B time source for the correlation of data across multiple ARINC825 CAN bus nodes.

Operation Modes

The AMC825-4 module provides different operation modes for all 4 CAN bus nodes. The board basically supports 2 different operational modes, the object and the FIFO mode. In the object mode each configured message ID has a separate buffer where message data and status information are stored in case of receiving IDs. In the object mode, IDs can also be configured to be transmitted cyclically (scheduled transmission). In the FIFO mode all or selected IDs are time stamped and stored in a FIFO in case of receiving IDs. The FIFO mode can be also used for transmitting IDs by passing the IDs to be sent to a transmit FIFO. In case of scheduled transmit operation the FIFO mode can be used in parallel e.g. to insert an acyclic transmission of IDs.

Independent from the selected modes above the board can be configured to operate in a listening-only mode which allows a passive monitoring of a CAN bus without disturbance of the existing traffic.

Furthermore automatic handling of CAN RTR-frame is supported via an auto-answer mode.

- Object and FIFO Transmit/Receive Modes supported
- CAN bus Listening-Only Mode for passive Monitoring
- Data Buffering with Real Time Data Updates
- Scheduled Transmission of IDs
- Acyclic Transmission of IDs
- ID oriented dependent Filtering
- Time Stamping of received Frames with IRIG-B Time Code 1 μ s Resolution
- Auto-Answer Mode for automatic RTR Frame Handling
- Physical Error Detection, Bit Error, CRC-/Format Error, Bit Stuffing Error
- Event Generation

Driver Software

The AMC825-4 modules are supplied with an Application Programming Interface (API) and Driver Software compatible with Windows, Linux and VxWorks.

Application Software

An ARINC825 resource component is available for AIM's ► **PBA.pro™** Databus Test and Analysis Tool including Tx and Rx simulation capabilities, a chronological Bus Monitor and support for decoding of payload data within CAN messages. This allows to implement a powerful CAN bus/ARINC825 analyzer or a complete test system in conjunction with other AIM avionics databus interfaces and PBA.pro™ supported 3rd party hardware.

Technical Data

System Interface

32-bit; 33/66MHz +3,3V (+5V tolerant)
PCibus (Rev. 2.2) compliant

Processors

FPGA based 32-bit Microcontroller Core
and 8051 Processor for IRIG-B handling

Memory

64MB DRAM (optional)

Encoder/Decoder

FPGA based CAN bus Controller Core

Time Tagging

46-bit absolute IRIG-B Time Code,
1µs resolution; free-wheeling

Physical Bus Interface

Up to 4x ISO11898-2 compliant high speed
transceivers. Each CAN bus node is
electrically isolated.

All signals are available at Front-I/O and
at Rear-I/O Interface

Front-I/O Interface Connector

1x 25-way D-Sub (male) connector,
providing 4 independent electrically
isolated CAN bus nodes, and IRIG-B Time
Code Input (analog IRIG-B and RS422)

Ordering Information

AMC825-4

4 CAN bus nodes ARINC825 on
PCI Mezzanine Card (PMC module),
Software programmable CAN bus nodes,
IRIG-B Time Stamping

ACP825-4

ARINC825 to PCI Module comprising
an AMC825-4 installed on an ACP-1,
PCI Carrier Card

ACC825-3U-4

ARINC825 to CPCI Module (3U)
comprising an AMC825-4 installed
on an ACC-1, CPCI Carrier Card (3U)

ACC825-6U-X

X= (4, 8)

ARINC825 to CPCI Module (6U)
comprising one or two AMC825-4
cards installed on the ACC-2,
CPCI Carrier Card (6U)

AVC825- X

X= (4, 8)

ARINC825 to VME Module comprising
one or two AMC825-4 cards installed
on the AVC-2, VME Carrier Card

Rear-I/O Interface Connector

1x Standard PMC Connector Position Pn4.
Includes all signals which are available
through Front-I/O Interface
Note: CAN bus is available at TTL level only

PMC/PCI Interface Connector

Pn1, Pn2 for PCI Bus Interface (Rev. 2.2)
compliant
32-bit, 33/66MHz, +3,3V (+5V tolerant)

Dimensions

149mm x 74mm, Standard PMC Format

Operating Temperature Range

Standard: 0°C to +50°C ambient
Extended: on request

Storage Temperature

-40°C to +85°C

Conduction cooling available

General Features

The ACPe-1 is a member of AIM's family of 32-bit extended PMC Carrier Boards. The ACPe-1 is a standard height, half-length, Single Lane PCI Express add-in card with one PMC slot to plug in a standard PMC module. The ACPe-1 implements a PCIe-to-PCI Bridge and fulfils the requirements of the PCI Express Base Specification Revision 1.0a on the primary side and the PCI Bus Specification Revision 3.0 on the secondary side. The PMC slot is in conformance with the Draft Standard Physical and Environmental Layers for PCI Mezzanine Cards (P1386.1/ Draft 2.4).

PMC Module Interface

The ACPe-1 is designed to plug in all standard PMC modules. The carrier provides a PCIbus width of 32-bit and a PCIbus operation frequency of either fixed 33MHz or 66MHz (defined by configuration/ ordering option). For special test purposes, the Rear-IO signals of the plugged in PMC module are routed to a 64-bit ribbon cable connector on the rear area of the ACPe-1 module (not available in default configuration).

The PMC slot on secondary PCIe-to-PCI bridge side is configured by default for +3.3V IO signalling voltage. Therefore the carrier can be used to host +3.3V or universal signalling PMC modules. For usage of +5.0V (only) PMC modules the Carrier have to be ordered by separate ordering number. The use of a voltage keying pin protects against false PMC assembly.

ACPe-1

PCI Express Generic Carrier Card for PMC (PCIbus Mezzanine Card) Modules

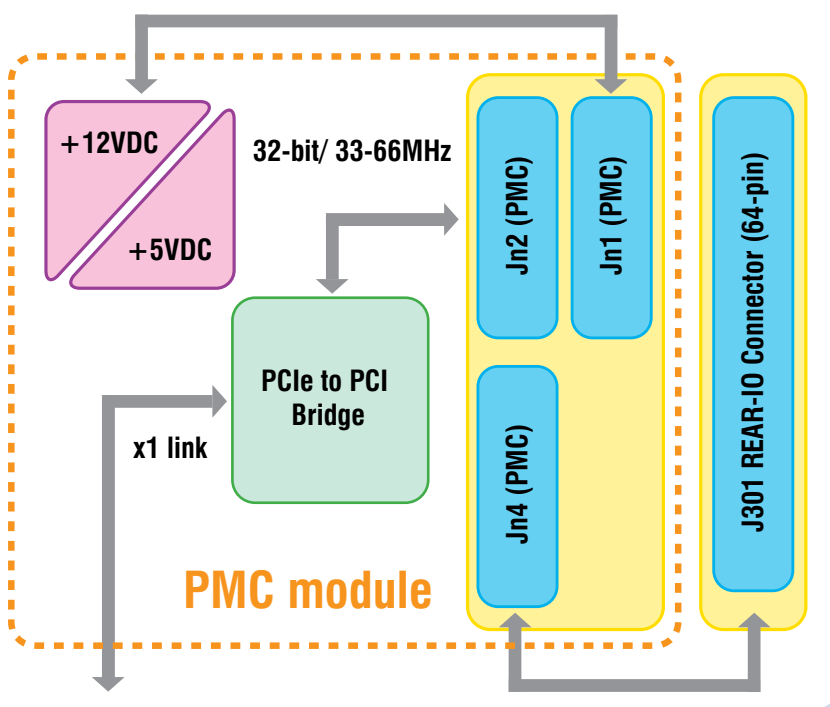

Plug all standard PMC Modules

Key Features

- Easily configured with any AIM PMC Databus Module: AFDX/ ARINC664, ARINC429, MIL-STD-1553 or any standard Third Party PMC module
- Default configuration is 32-bit@33MHz
- Up to 66MHz PCIbus operation for +3.3V environments
- +5.0V signaling environment available
- Fully compliant to PCI Express Specification, Rev. 1.0a
- Fully compliant to PCI Specification, Rev. 3.0
- Hosts PMC interfaces designed to PMC standard P1386.1/ Draft 2.4
- Onboard +5VDC Power Supply (up to 10W) and -12VDC Power Supply (up to 12W, used for AMC429 modules) are provided

Technical Data

PCI Express Interface

- Fully compliant to PCI Express Base Specification, Revision 1.0a
- Fully compliant to PCI Express Card Electromechanical Specification, Rev. 1.0a
- Single lane standard height, half-length PCI Express add-in card
- 2.5 Gb/s data rate

PMC Interface

- Provides one PMC slot
- Fully compliant to PCI Mezzanine card standardisation P1386.1/ Draft 2.4
- Supports either +5V or +3.3V signaling voltage, protected by PMC Keying Code (configuration/ Ordering option)
- PMC Databus width of 32-bit
- PMC Databus operation of 33MHz (default)/ 66MHz
- Onboard +5VDC Power Supply (up to 10W) and -12VDC Power Supply (up to 12W) to supply ARINC429 Transmitters

Front Panel:

PMC-Bezel standard Breakout on PCI Express-Bracket

Dimensions:

Single lane PCI Express add-in card: 167.64mm x 106.68mm

Power Dissipation:

1W maximum: @full BusLoad (excludes PMC-module power dissipation)

Temperature:

0°C to +70°C Standard Operating

-40°C to +85°C Extended Temperature

-40°C to +85°C Storage

Humidity:

5 to 95% non-condensing

Ordering Information

ACPe-1: PCIe bus (1.0a) Single Lane Carrier Module with one PMC slot (3.3V/33MHz version)

ACPe-1-66MHz: PCIe bus (1.0a) Single Carrier Module with one PMC slot (3.3V/66MHz version)

ACPe-1-5V: PCIe bus (1.0a) Single Carrier Module with one PMC slot (5V/33MHz version)
